[1] **Asset Allocation Portfolios**
Asset allocation does not ensure a profit, nor protect against loss in a declining market.

[2] **Bond Portfolios**
The return of principal in bond portfolios is not guaranteed. Bond Portfolios have the same interest rate, inflation, credit, duration, prepayment and market risks that are associated with the underlying bonds owned by the fund (or account).

[3] **Cash Management Funds**
An investment in Cash Management Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any other government agency. Although this option seeks to preserve the value of your investment, it is not managed to maintain a stable net asset value of $1 per share and it is possible to lose money by investing in this investment option.

[4] **International**
Investing internationally involves risks not associated with investing solely in the United States, such as currency fluctuation, political or regulatory risk, currency exchange rate changes, differences in accounting and the limited availability of information.

[5] **Fund of Funds**
Each Fund is operated as a fund of funds which invests primarily in other funds rather than in individual securities. Funds of this nature may be more expensive than other investment options. Each Fund invests its assets in a number of underlying funds. From time to time, the Fund's adviser may modify the asset allocation for the underlying funds in which each Fund invests including the addition of new funds. A Fund's actual allocation may vary from the target strategic allocation at any point in time. Additionally, the Fund's adviser may also manage assets of the underlying funds directly for a variety of purposes.

[6] **Small & Mid Cap**
Funds that invest in small and/or mid-size company stocks typically are more volatile and involve greater risk, particularly in the short term, than those investing in larger, more established companies.

[7] **High Yield or Mortgage Backed Portfolios**
High yield portfolios may invest in high-yield or lower rated fixed-income securities (junk bonds) or mortgage-backed securities, with exposure to sub-prime mortgages, which may experience higher volatility and increased risk of non-payment or default.

[8] **Risk Management Strategy**
The Fund's risk management style is not a guarantee, and the Fund's shareholders may experience losses. The Fund employs hedging strategies designed to provide for downside protection during sharp downward movements in equity markets. The cost of these hedging strategies could limit the upside participation of the Fund in rising equity markets relative to other un-hedged funds.

[9] **Emerging Markets**
Investing in emerging markets can be riskier than investing in well-established foreign markets. International investing involves special risks not found in domestic investing, including increased political, social and economic instability, all of which are magnified in emerging markets.

Important Disclosures

Lincoln Financial Group is the marketing name for Lincoln National Corporation and its affiliates.

This variable product is issued on form numbers 28618 and 30070-B and state variations by The Lincoln National Life Insurance Company, Fort Wayne, IN, and distributed by Lincoln Financial Distributors, Inc., a broker/dealer.
