Not all funds may be available for your policy. Please refer to your product prospectus for details.

¹ Asset Allocation Portfolios

Asset allocation does not ensure a profit, nor protect against loss in a declining market.

² Bond Portfolios

The return of principal in bond portfolios is not guaranteed. Bond Portfolios have the same interest rate, inflation, credit, prepayment and market risks that are associated with the underlying bonds owned by the fund (or account).

³ Cash Management Funds

An investment in Cash Management Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any other government agency. Although this option seeks to preserve the value of your investment, it is not managed to maintain a stable net asset value of \$1 per share and it is possible to lose money by investing in this investment option.

⁴ International

Investing internationally involves risks not associated with investing solely in the United States, such as currency fluctuation, political risk, differences in accounting and the limited availability of information.

⁵ Small & Mid Cap

Funds that invest in small and/or mid-size company stocks typically involve greater risk, particularly in the short term, than those investing in larger, more established companies.

⁶ High Yield Portfolios

High yield portfolios may invest in high-yield or lower rated fixed-income securities (junk bonds), which may experience higher volatility and increased risk of non-payment or default.

⁷ Protection Sub-strategy

The Fund's protection sub-strategy is not a guarantee, and the Fund's shareholders may experience losses. The Fund employs hedging strategies designed to provide for downside protection during sharp downward movements in equity markets. The cost of these hedging strategies could limit the upside participation of the Fund in rising equity markets relative to other un-hedged funds.

⁸ Fund of Funds

Each Fund is operated as a fund of funds which invests primarily in other funds rather than in individual securities. Funds of this nature may be more expensive than other investment options.

⁹ Emerging Markets

Investing in emerging markets can be riskier than investing in well-established foreign markets. International investing involves special risks not found in domestic investing, including increased political, social and economic instability.

Important Disclosures
